

1 HEAD COLD PRESS OIL MACHINE

Height: 1.25m

Length: 0.9m

Width: 0.5m

Weight : 150 KG (330lbs)

Capacity: 300lb/day(depending on nozzle used, seed density and moisture)

Motor: 2.2kW and available in a variety of voltages, typically 220V single phase

Typical oil removal: 85-95% (depending on nozzle, moisture and seed condition)

Materials used:

1.4121 SS, 1.4125 SS, 1.2379 SS and 51420 CHROME NICKEL

Screws and filters are sourced from a German-Turkish joint venture which is known worldwide for top quality products. See www.birlesikmetal.com.tr

Wear components undergo a heating and hardening process that subjects components to 1030-1050 C (depending on material) and reheated after cooling to 150 C. Final processing includes coating with nickel phosphate to increase durability.

The standard single head press includes feed funnel, digital speed and heat control and stand to enable ease of operation. A bulk seed tank option is available as well. Systems are designed to ensure customers achieve projected scale up results.

Our systems are warranted 10 years on drive system and our high quality replacement parts are stocked in our Nebraska facility. Nebraska Screw Press is the authorized North American source for this equipment manufactured by www.tokultarim.com
