

Seed Tanks for Single Head Machines

Height: 2.30m (mounted on machine)

Length: 0.8m

Width: 0.8m

Weight : 25 KG

Capacity: Estimated 100KG, depending on material density

Materials used: SS Construction

The standard single head press includes a feed funnel that can hold materials for immediate processing, but the optional seed tank can provide overhead storage of materials so you can take advantage of the machines ability to operate without supervision for at least 12 hours.

The integrated overhead seed bunk is designed specifically for our single head machines and is easy to set up and remove. The unit breaks down very efficiently for shipment and will add only a nominal impact to shipping costs on a single head machine. Loading augers are also available to fill the seed tank.

See through window makes it easy to check seed level and a sluice type valve at the bottom of the cone is built into the unit so that feed may be shut off to the feed funnel at any time.

Please contact us if you are interested in adding this option to your single head pressing unit.
